

SCHOOL  
BELL  
SOFTWARE

Never agonize over  
changing the bell  
schedule again!

What runs through your mind when it's time  
to change your school bell schedule?

- ! "It's impossible"
- ! "A fortune in service calls"
- ! "Too confusing"
- ! "Complicated"
- ! "Our system is obsolete and can't be changed"

How often would you change your schedule  
if it could be done in a matter of seconds?

- If tomorrow's schedule is disrupted by a weather delay .. wouldn't it be nice to change the bell schedule ***in a matter of seconds?***
- This week you have an assembly and periods two and three are off the normal schedule by just a few minutes. Again, ***in a matter of seconds***, the schedule is changed.
- Suppose the Monday schedule over the next two weeks will be unique and requires a small change to your scheduled bells. Is it worth the time, money, or effort to make the change to your existing system? How would you like to make the change — you guessed it! — ***in a matter of seconds?***

**Priority Time can make it that easy!** Priority Computer Services, Inc. has designed a solution that makes changing your bell schedule as easy as making a PA announcement. With an ordinary computer, you can have complete control over your bell schedule.

# Feature Overview

## Weekly Schedules

- Create a default automatic weekly schedule
- Create unique weekly schedules to run in place of the default schedule

## Daily Schedules

- Create as many daily schedules as you need
- Add up to 28 events per daily schedule
- Assign a daily schedule to any day of the week, any week of the year
- Easily edit a daily schedule
- Turn daily schedules on or off with a single click of the mouse

## Event Sounds

- Easily assign a sound — voice, music, tones, etc. — to a daily event
- Use pre-recorded sounds or record your own using built-in recorder
- Import MP3 or Windows media file
- Manually play an event sound at any time

## General

- Instant access to current time, next scheduled event and “today’s schedule”
- Connects to existing PA system
- Does not interrupt microphone announcements
- Supports legacy PA systems that have no audio input

## Common Applications

- Any time you would like to schedule a pre-recorded event
- Special days such as compressed, delayed, assembly, picture, testing, etc.
- Parent-Teacher Conferences
- Back-to-School Night schedule walk-through
- Bus/Walker calls
- Daily announcements
- Athlete calls
- Whenever you need to be in two places at once
